

Dear FCC,

I was informed by xmradio that the NAB has a problem that xm radio provides me with information that is important and helpful such as local weather and traffic in addition to music, news and talk radio, which may I say has put out a far better product than any AM or FM station. My question to you is why aren't they finding a way to better their product instead of trying to sabbotage the competition. By the way I am paying for this service and I am grateful to have the pleasure to listen to what ever I want to and not be tormented the crap that AM and FM have to offer.

My request is that you reject petition 04-160 and tell the NAB to just go away or get better.

Sincerely,

Stuart Kaplan
